

Taxonomy Database

Key Database

We did not perform the silver impregnation, which is the essential technique for the modern identification of some ciliates. However, some of the older taxonomic keys can be applied to our preparations. Thus, we have picked up the relating keys from Kahl's references (Wimpertiere oder Ciliata, Kahl, 1930 - 1935), and summarized as our taxonomy database.

Database Fields

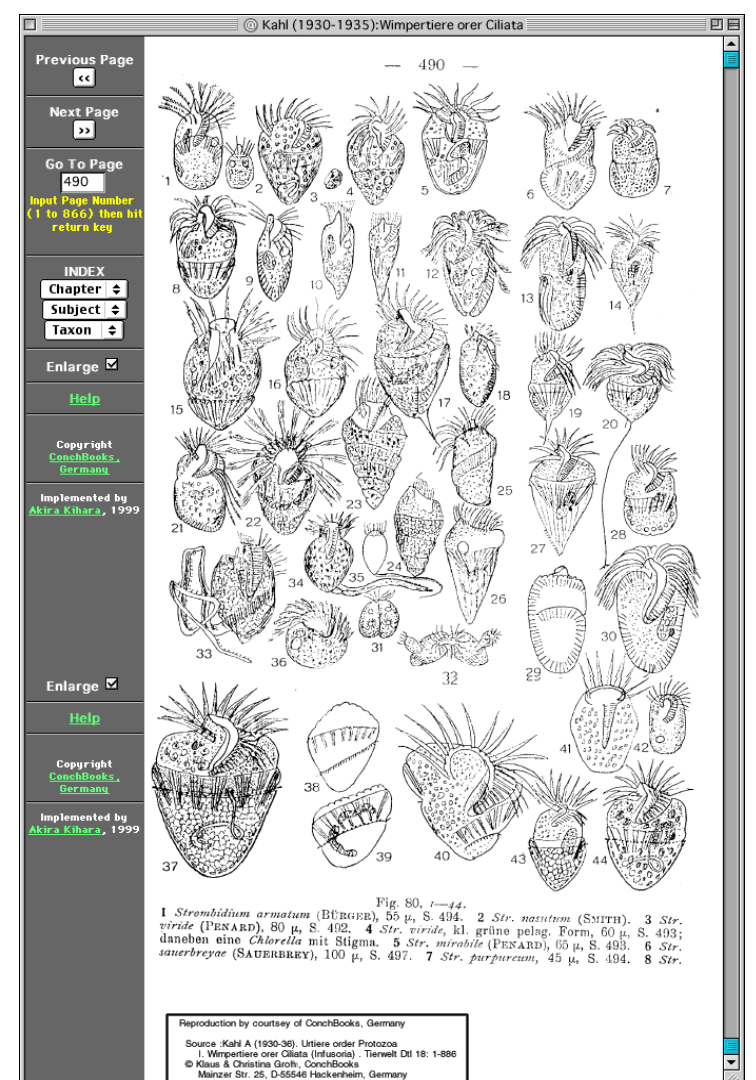

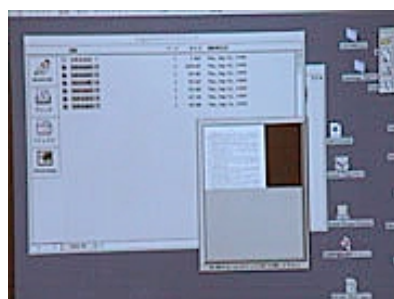

Taxon ID: Unique Number and Characters for Each Taxon

Images for Identification, Information for Identification

Digital Image Book

Since Kahl's references (Wimpertiere oder Ciliata, Kahl, 1930 - 1935) are too rare to get, we have digitized and make it accessible through Internet, with our original interface of the digital image book.

The part of the copyright expired after 70 years from the first publishing date. But the one of other part still remain. So we have got permission from the copyrighter (Conch Books, Germany).
